

Assignment 02 Observation

1: Handling Missing Values

I checked the Price column for missing values and replaced the blank prices with the median value. I also checked the Category column and filled the blank categories based on the related product.

2: Correcting Inconsistent Data

I identified inconsistent text formats in the Product Name column and standardized them using Find and Replace. I also corrected the typo "Electroni" to "Electronics" in the Category column.

3: Removing Duplicates

I checked the dataset for duplicate rows and removed the duplicate records using Excel's Remove Duplicates feature.

4: Splitting and Merging Data

I split the Product ID into Manufacturing Date and Country Code. Then, I merged the Brand Name and Product Name columns into a new column called Product Brand.

5: Number Formatting

I formatted the Price column as Currency (\$) and formatted the Manufacturing Date column to display dates in the DD-MM-YYYY format.

6: Conditional Formatting

I applied Data Bars to the Price column and highlighted the Electronics category using a custom conditional formatting rule.
