

Sheet	Observation
Customer_Clean	A few customer loyalty levels were missing, so they were marked as Unknown instead of assuming a value.
Customer_Clean	Country names were entered in different formats such as USA, usa, and United States of America. They were standardized to USA.
Customer_Clean	Some customer names had extra spaces. The spaces were removed using the TRIM function.
Product_Clean	Two product IDs were in a different format (P-3 and P-16). They were corrected to match the PROD format used in the dataset.
Product_Clean	Some Cost values were missing. The missing values were filled using the median Cost.
Product_Clean	A few Stock values were missing, so the median Stock value was used.
Store_Clean	The Store data was checked for duplicates and missing values. No major issues were found.
Sales_Clean	Some Quantity values were missing. They were calculated using the available Total Amount, Unit Price and Discount values.
Sales_Clean	Missing Unit Price values were calculated wherever enough information was available.
Sales_Clean	Missing Discount values were calculated from the available sales values.
Sales_Clean	Missing Total Amount values were recalculated using Quantity, Unit Price and Discount.
Sales_Clean	One sales record had both Unit Price and Discount missing, so a reasonable median-based value was used and documented.
Analysis	XLOOKUP was used to bring customer, product and store details into the sales data.
Analysis	Some Customer IDs were not available in the Customer table, so they were shown as Not Found instead of adding made-up customer information.
